Hamilton's New Data Access Network is the key to taking control of your wash!

D.A.N. can provide you with greater through-put, more ways to attract loyal customers and a more convenient method of keeping track of your money.

The Data Access Network keeps you connected to your business.

The Data Access Network, or D.A.N., is a powerful network that will provide you with greater through-put, more ways to attract loyal customers and a more convenient method of keeping track of your money. D.A.N. comes preloaded with all of the software needed to achieve greater levels of productivity from your business, including the Microsoft XP Professional® Operating System.

With the Data Access Network, you can create a valuable new marketing program for your automatic car wash using Hamilton's exclusive new Customer Value Cards. The Customer Value Cards can be custom imprinted with your name, logo, location, etc. You can sell them inside the convenience store as a prepaid gift card or as a fleet

account card with prepay or post-pay billing options. Giving preloaded cards to local charities for fundraisers earns your business recognition and gives the charities an effective way to raise money. If you'd like to give a bonus to your lube center customers, give them a card preprogrammed for a credit toward a wash, free with an oil change. Customers can come back at any time to have their cards recharged for a convenient way to pay for future washes. Any way you choose to use them, Customer Value Cards are a great way to keep customers coming back again and again.

That's not all D.A.N. can do for you. The Data Access Network brings your wait for high speed credit card processing to an end! Is an average of five seconds or

less to clear a credit card fast enough? All you need is a high speed Internet connection at the site.* It's just that easy to increase your through-put and reduce customer wait time.

By networking D.A.N. with your Gold Line® Autocashiers and your Hamilton Changers, you can remotely manage your site from the comfort of your favorite chair. Find out instantly how much money the machines have accepted or their operational status without leaving your home or office. Electronic audit reports can be transferred to an accounting program for further manipulation of the data.

Reconfiguring your Autocashier is just as easy. With the new variable price structuring feature, you can set your Autocashier to change prices automatically on a daily or weekly basis. You can also change the messages on your scrolling display to advertise daily specials. Again, there is no need to leave your home or office. The information can be sent via Internet connection right to the machine.

The Data Access Network can provide you with more ways to attract loyal customers with fleet and gift cards, greater through-put using high speed credit card processing and keeps you connected to your business with remote communication to your Hamilton equipment.

* Existing Gold Line® Autocashiers will need additional updates.
